Dies und das

Rechnen

```
Bash: echo $(( 22/7 ))
dc: echo 2 k 22 7 / p | dc
bc: echo '22/7' | bc
bc: echo '22/7' | bc -1
alias calc='bc -l <<<'</li>
calc '4*a(1)'
```

Suchen & Finden

ls

```
ls -ltr-a -h -i
```

find

```
• find . -name '*.yml' -exec ls -l {} \;
```

type / which / file

```
• type datei
```

- type lp
- type -p datei
- file \$(type -p datei)

head / tail / less

- head -3 ~/bin/ismrest/ism_cmd
- ssh rhel85 tail /var/log/messages
- Auf rhel85: tail -f /var/log/messages
- ssh klingelpi.fritz.box docker ps | less -S

Filtern und Bearbeiten

grep

- grep orth project.txt
- grep -i orth project.txt
- grep -i o.*h project.txt
- grep -iv orth project.txt
- less sshd_config
- rmc = 'egrep -v "^\s*\$ | #" \$@'
- cat sshd_config vs.rmc sshd_config

sed

- Editieren/Erweitern environment
- · Editieren mit vi
- Ändern mit sed -i 's/:.*/:4711/' environment

awk

- Check Datei 'project.txt'
- Ändern mit awk '\$3=="Telekom" {sum+=\$2} END {print "Telekom:",sum}' project.txt

jq

- Ansehen people.json
- Fehler finden
- jq als Validierer/Formatierer jq . ismnodes.json
- cat people.json | jq '.Peoples[]|select(.Gender=="female")
- cat people.json | jq -j '.Peoples[]|select(.Gender=="male")|.FirstName," ",.LastName,"\n"'
- cat people.json | jq '.Peoples[]|select(.LastName=="Bauer")|.Topic="K8s"'
- j2y <people.json
